

SINONIN BIOTECH GMBH · 16 AUGUST 2026

Website Redesign

A rebuilt, bilingual sinoninbio.tech: already built, live, and ready to review.

This is not a concept or a mockup. The site described in this document is **finished and running**. Open it on your phone, tablet or laptop before you read any further. Everything after this page is evidence for what you will already have seen.

LIVE PREVIEW

sinonin-bio-tech.vercel.app

Full site, both languages, all pages. Use the EN / DE switch in the header.

PREPARED FOR

Sinonin Biotech GmbH
Marienstr. 15, 27299 Langwedel, Germany

WHY YOU ARE RECEIVING THIS

I fixed the page that should be selling your reports.

Dr. Cheison, you did not ask me for this, so let me be direct about why it exists.

While reading your writing on palatability, I clicked through to **Market Reports**, the page where a manufacturer would ask to buy a report. It is empty. It carries a byline that reads "4 Oct, 2022 · Administrator · 0", and the four real report pages, each with a working order form on it, sit underneath a menu where almost nobody will find them.

That is a commercial page, not a cosmetic one. So rather than send you a list of opinions, I rebuilt the site and fixed it, along with everything else I found while I was in there. It is finished, it is live, and this document is the account of what changed and why.

The science on your site is genuinely good. That is the problem worth solving: **the site is currently making it look smaller than it is.**

HOW TO READ THE NUMBERS IN THIS DOCUMENT

METHOD

Every figure on the next page was **measured, not estimated**. Both sites were loaded in the same browser over the public internet, from a cold cache, and the browser's own performance timings were read directly. Nothing is a benchmark score or a third-party grade. These are the bytes your visitors actually download and the seconds they actually wait.

Page-weight and request counts are network-independent and directly comparable. Load times vary with connection and location; they are included because the gap is large enough to matter, not as a precise guarantee.

BEFORE YOU TURN THE PAGE

- 1 Open **sinoninbio.tech** on your phone, tablet or laptop. Note how long the first screen takes, and what is on it.
- 2 Open **sinonin-bio-tech.vercel.app** on the same device, on the same connection.
- 3 Switch it to **German** using the toggle in the header, then open **Market Reports**.

WHAT I MEASURED

The current site, side by side with the new one.

HOMEPAGE · MEASURED COLD OVER THE PUBLIC INTERNET			16 AUG 2026
METRIC	SINONINBIO.TECH (CURRENT)	NEW BUILD	
Total page weight	10.9 MB	0.77 MB	
Requests to load one page	104	18	
HTML document alone	3,300 KB	27 KB	
Stylesheets	44 files · 9.0 MB	2 files · 99 KB	
Scripts	45	bundled	
Time to fully loaded	27.2 s	3.4 s	
Page usable (DOM ready)	15.1 s	1.6 s	
Sideways scrolling on a phone	Yes: 383px in a 375px screen	None	
Headline position on a phone	937px down (1.2 screens)	In the first screen	
Main heading (H1)	"Sinonin Biotech GmbH" ×2	The proposition ×1	
Search description tag	None	Every page	
Languages declared to Google	English only	EN · DE · default	
Image shown when shared	BMWK.png, a funder's logo	Branded, 1200px	
Platform	WordPress 7.0.4 + plugins	47 pre-built pages	

The single line that matters most: a visitor on a phone waits **27 seconds** and downloads **10.9 MB** (of which 9 MB is stylesheet code from stacked plugins, not content) before the page finishes. The rebuilt site delivers the same message in 0.77 MB.

BEYOND THE NUMBERS

Four findings worth naming.

Speed is the easy part to fix. These four cost you enquiries directly, and none of them are visible from the homepage.

1 · Market Reports: your commercial page is empty

The hub page shows a stale "4 Oct, 2022 · Administrator · 0" byline and no reports at all. The four report pages beneath it *do* have working order forms, asking for name, email, phone, company and job title: a properly designed lead capture. So the machinery for selling reports already exists; the page standing in front of it is dead, and the forms sit two levels down a menu where a buyer has to go looking. **This is the single clearest case of revenue left on the table.**

2 · The blog is one page of 26,429 words

The blog index does not list your articles. It prints six of them in full, end to end, on a single address. 103,216 pixels tall, roughly 127 phone screens of scrolling. Nobody reaches the sixth piece. It also places six H1 headings on one page, which tells Google the index and the real articles are competing, and splits the ranking you have earned between them. **Your best asset is your writing, and it is the thing the site handles worst.**

3 · A German company, invisible in German

The site is English-only and declares no German alternative to search engines whatsoever. For a GmbH registered in Langwedel, selling into European petfood manufacturing, every German-language search for insect protein, palatants or formulation support currently resolves to a competitor. **This is the largest untapped audience you have, and it costs nothing extra to reach.**

4 · Product images at 71 × 108 pixels

The packshot on the insect protein page is natively 71 pixels wide, stretched to fill its slot, visibly soft next to the brands it is meant to represent. Your logo, meanwhile, ships at 1,280px into a 216px space, roughly 35× more data than needed. On that same page only four of eight images loaded at all, against five brands named in the copy. **You are selling scientific precision; the images undercut it.**

WHAT THIS CHANGES

Eight things you get that you do not have today.

Outcomes rather than features: what changes about the business, not the code.

01

Your reports become buyable

A working Market Reports hub, plus a dedicated page per report with its own request form. The revenue path that is currently blocked by an empty page is open.

02

You can sell in German

The full site in both languages, not a translated homepage. A German buyer reads German, and Google can finally see that you serve the market you are registered in.

03

A compliance gap closes

Your report form collects name, email, phone, company and job title with no consent step, and no German privacy policy behind it. Now: a consent checkbox on every form, and Datenschutz in both languages.

04

Your writing works as credibility

Each article gets its own page, cover image and summary card. Individually shareable, individually rankable, and readable on a phone, instead of buried in a 26,000-word wall.

05

The homepage makes a claim

A single clear proposition in the first screen, then a deliberate path: the four expertise areas, the protein-security case, reports, training, and who you are.

06

It works properly on a phone

No sideways scrolling, no 10px text, tap targets sized for thumbs. This matters most where you already share your work. LinkedIn traffic is overwhelmingly mobile.

07

Shares carry your brand

Every link you post currently pulls a funder's logo as its picture. Now each page has its own branded share image, title and description.

08

Nothing to maintain or patch

No plugin stack, no WordPress updates, no security surface to keep an eye on. Nothing to break while you are not looking.

WHAT HAPPENS TO THE RANKINGS YOU ALREADY HAVE

CONTINUITY

A rebuild normally costs you your search position: every address changes, and Google treats the new pages as strangers. That does not happen here. **Fifteen redirect rules** map every old address to its replacement, including the tag, category and author archives WordPress generated on your behalf. Anyone arriving on an old link, whether from a search result or a citation in someone else's article, lands on the right page rather than an error.

WHAT IS DELIVERED

Scope: all of it already built.

PAGES	~10 TEMPLATES × 2 LANGUAGES	INCLUDED IN THE BASE PACKAGE	BUILD
■ Home: hero, supporter strip (BMWK, GIZ, EUIPO, BIC, BALPro), four expertise pillars, the protein-security story, reports and training teasers, founder note, latest writing. ■ Expertise: one page, four anchored sections: proteins, palatants, enzymes, insects. ■ Training: its own page, pulled out of the homepage. ■ Market Reports: working hub plus four report pages, each with a request form. ■ About: founder story, the Nandi name origin, mission and vision, family of businesses. ■ Blog: card index plus a page per article, all existing posts migrated. ■ Contact: booking as the primary action, enquiry form as secondary. ■ Legal: Impressum and Datenschutz, both languages.		■ Custom design on your own identity: forest green, navy, the gradient drawn from your logo. ■ Complete rebuild, statically served: 47 pre-built pages, sub-second delivery. ■ Site-wide search in the header, keyboard operable, covering every page and article. ■ Bilingual throughout (EN default, DE), 289 of 289 strings translated, with no gaps and no machine stubs. ■ All copy rewritten for clarity and grammar, every fact preserved; German follows your approved English. ■ Report request and contact forms with a GDPR consent checkbox. ■ Full SEO: metadata, share images, sitemap, and a redirect map from every old address. ■ Mobile-responsive, accessibility-checked, restrained motion, no gimmicks. ■ Deployment to a European edge network (Frankfurt), HTTPS included. ■ One training session on running the site. ■ One year of technical support at no charge.	

ADDED ON ACCEPTANCE, AT NO EXTRA COST		
Two things you will want, included in the same price. You publish often, so you should not need me in order to post, and an enquiry form is worth nothing if the mail never arrives. Both are shown at what they would normally cost.		
Content management system: publish and edit articles, swap images and update report descriptions yourself, from the browser, in both languages. No developer, no plugins.	KSh 12,000	Included
Contact and enquiry mail system: forms wired to a verified address, delivery confirmed end to end, with your booking calendar connected as the primary call to action.	KSh 5,000	Included
Additional value at no charge		KSh 17,000

Both delivered after acceptance. The booking link and mail address need one confirmation click from you.

INVESTMENT

One figure, nothing withheld.

ITEM	AMOUNT
Website UI/UX redesign & bilingual development ~10 templates × 2 languages · 47 pre-built pages · reports hub with lead capture · blog migration · full SEO and redirect map · deployment · 1 training session · 1 year support	KSh 40,000
Content management system Self-service publishing for articles, images and report copy, both languages	Included
Contact & enquiry mail system Form delivery verified end to end, booking calendar connected	Included
GRAND TOTAL KSh 40,000	

TERMS

- 50% deposit upon approval of this proposal.
- 50% balance upon completion and handover.
- Additional features billed separately upon request.
- Payments are non-refundable once work has commenced.
- Payable via M-Pesa or bank transfer.
- Domain and hosting remain registered in your name; you hold the accounts.

NEXT STEPS

- 1 Review the live site:** on your phone, tablet or laptop, in both languages.
- 2 Send corrections.** Anything factual, scientific or in the German wording, I will change.
- 3 Approve,** and the deposit invoice follows.
- 4 Handover in one week:** CMS added, mail wired, DNS switched, training session held.
